

# Product Application Schedule

## Product Application Tips:

- Before using any product, read and carefully observe all information appearing on the label.
- Store all lawn and garden products in their original container and keep tightly closed.
- While Hollandia does not discourage the use of organic products, please be aware that they generally cost more and may need more than one application to be effective.

## Spreader Settings:

Whether you have a rotary spreader or a drop spreader, it's best to apply products using spreader settings listed on the product label. Spreader calibration may be necessary every couple years.

## Spray Tank Settings:

At the beginning of the season, be sure to inspect, clean and calibrate your sprayer to ensure proper application rates, avoid waste and to avoid accidental spraying into unintended areas. Refer to your sprayer manual for cleaning and calibration instructions and follow product guidelines for application rates.
